GoldSurgeon Elite v1

MT5 XAUUSD Institutional Scalping EA

Setup, Configuration & Operation Guide

Symbol	Strategy	Account	Risk/Trade
XAUUSD (Gold)	Multi-Confluence Scalp	Cent / Standard	1.5% equity

1. System Requirements

1.1 Platform & Version

Requirement	Specification
Platform	MetaTrader 5 (MT5) Build 3000+
MQL5 Compiler	MQL5 Build 2361+ (included with MT5)
Operating System	Windows 7/10/11 or VPS (Ubuntu via Wine)
Symbol Required	XAUUSD (Gold vs US Dollar)
Account Type	Cent Account (recommended) or Standard
Leverage	1:200 minimum | 1:500 recommended
Minimum Balance	$10 (cent) or $100 (standard)
Internet Connection	Stable, low-latency (VPS strongly advised)

1.2 Recommended Brokers

The EA requires tight spreads on XAUUSD. The following brokers are tested and compatible:

Broker	Avg Spread	Min Lot	Notes
IC Markets	0.1-0.3 pts	0.01	Best raw spread
Exness	0.3-0.8 pts	0.01	Instant withdraw
XM Global	0.5-1.5 pts	0.01	KE-registered

Broker	Avg Spread	Min Lot	Notes
FBS	0.8-2.0 pts	0.01	Cent account support

2. Chart Setup & Timeframe

> CRITICAL: The EA must be attached to ONE specific chart timeframe only. Attaching to the wrong timeframe will break internal logic.

2.1 Correct Chart Timeframe

Attach the EA to the M5 (5-Minute) chart.

The EA uses multiple internal timeframes to build its confluence score, but it must be attached to M5 because:

- The primary entry triggers (MACD, Stochastic, CCI, EMA 8/21/50) run on M5
- Order Block and Fair Value Gap (FVG) pattern detection uses M5 candles
- The execution and partial-close management loop runs on M5 ticks

2.2 Internal Multi-Timeframe Architecture

Even though you attach to M5, the EA internally reads the following timeframes simultaneously:

Timeframe	Indicators	Purpose
M1 (1-min)	RSI (14)	Fast momentum entry trigger
M5 (5-min)	MACD, Stochastic, CCI, Bollinger Bands, EMA 8/21/50	Primary signal + OB/FVG structure
M15 (15-min)	ATR (14), EMA 200	Volatility gate + medium-term filter
H1 (1-hour)	EMA 8/21/50/200, ADX (14)	Higher-timeframe bias + trend strength

2.3 Chart Setup Steps

1. Open MetaTrader 5 and log in to your account
2. Right-click "Market Watch" > search for XAUUSD > drag it to a chart window
3. In the top toolbar, set the timeframe to M5
4. Ensure the chart title shows XAUUSD, M5 in the top-left corner

5. Do NOT add manual indicators — the EA manages all indicators internally

3. Installing the EA

3.1 Compile the EA

6. In MT5, open the MetaEditor: press F4 or go to Tools > MetaQuotes Language Editor
7. In MetaEditor, go to File > Open, navigate to the GoldSurgeon Elite v1.mq5 file and open it
8. Press F7 to compile. Look for 0 errors in the Errors tab at the bottom
9. The compiled .ex5 file is automatically placed in the correct folder

3.2 Attach EA to Chart

10. Return to MT5. In the Navigator panel (Ctrl+N), expand Expert Advisors
11. Find GoldSurgeon Elite v1 and double-click (or drag it onto the M5 XAUUSD chart)
12. The inputs dialog will open configure parameters as described in Section 4
13. Tick "Allow Algorithmic Trading" in the Common tab, then click OK
14. Confirm a green arrow icon appears in the top-right of the chart EA is live

4. Parameter Configuration

> Parameters below are optimised for a $10 cent account. For a $100+ account, Risk_Pct can be reduced to 1.0% for safer compounding.

4.1 Identity

Parameter	Default Value	Description
EA_Name	GoldSurgeon_Elite	Internal label shown on chart & journal
Magic_Number	20260601	Unique ID — do not change if multiple EAs running

4.2 Risk Management

Parameter	Default	Description
Risk_Pct	1.5%	% of equity risked per trade. Auto-calculates lot size

Parameter	Default	Description
Max_Daily_DD_Pct	3.0%	Kill switch: EA stops if daily loss exceeds this
Max_Daily_Trades	10	Hard cap on number of trades per day
Max_Cons_Losses	3	Halts EA after this many consecutive losses
Cooldown_Minutes	15	Minimum gap (minutes) between trade entries

4.3 Stop Loss & Take Profit

Parameter	Default	Description
SL_Pips	8	Stop Loss distance in pips from entry price
TP1_Pips	10	First target — triggers partial close
TP2_Pips	20	Second (full exit) target — runner rides here
TP1_ClosePct	50%	% of position closed when TP1 is hit
BE_Buffer_Pips	2	Pips above entry where SL moves after TP1

4.4 Confluence Scoring (Advanced — do not change unless experienced)

Parameter	Default	Description
Min_Score	80	Minimum confluence score (0-100) to fire a trade
W_Session	15	Session timing layer weight
W_Trend	25	EMA stack + ADX trend layer weight
W_Momentum	20	RSI/MACD/Stoch/CCI momentum layer weight
W_Structure	25	Smart Money (OB/FVG/Sweeps) layer weight
W_Volatility	15	ATR + Bollinger Band volatility layer weight

4.5 Execution Protection

Parameter	Default	Description
Max_Spread_Pts	25	EA will not trade if spread exceeds this (in points)
Slippage_Pts	3	Maximum allowed execution slippage in points

4.6 News Filter

Parameter	Default	Description
UseNewsFilter	true	Enable/disable news time blackout windows
NewsWindow_1	08:25-08:35	News blackout time window 1 (server GMT time)
NewsWindow_2	12:55-13:05	News blackout time window 2
NewsWindow_3	15:25-15:35	News blackout time window 3
NewsBuffer_Mins	30	Minutes before and after each window to pause

> News window times are in your broker's server time (GMT). Check your broker's GMT offset and adjust windows accordingly before going live.

5. Trading Session Guide

5.1 Session Priority Levels

Session	Server GMT Hours	Score Weight	EA Behaviour
London/NY Overlap	13:00 - 16:59	100% (15pts)	Highest priority. Most trades fire here
London Open	08:00 - 12:59	85% (~13pts)	High activity. Breakout setups common
NY Afternoon	17:00 - 20:59	65% (~10pts)	Momentum continuation trades
Tokyo Session	00:00 - 07:59	25% (~4pts)	Low activity. Mostly skipped by score gate
Market Gaps / Off	21:00 - 23:59	10% (~2pts)	Effectively disabled

> The EA scores sessions automatically. You do not need to manually enable/disable sessions — the Min_Score gate handles filtering.

6. Trade Lifecycle

6.1 Entry Flow

- Every tick, the EA evaluates all 5 confluence layers and sums the score
- If total score is less than 80, no trade is opened
- If total score is 80 or above AND bias is directional (BULL or BEAR), the EA executes
- Only 1 position is open at a time per symbol (CountMyPositions check)

6.2 Position Management Flow

Milestone	What Happens
Trade Opens	Full lot size placed with SL at 8 pips and TP at 20 pips
TP1 Hit (10 pips)	50% of position closed. Remaining 50% continues as runner
Break-Even Set	Stop Loss moved to entry + 2 pips after TP1 hit (risk-free runner)
TP2 Hit (20 pips)	Remaining 50% closes. Full trade cycle complete
SL Hit	Full loss recorded. Consecutive loss counter incremented

7. Circuit Breakers & Safety Systems

Circuit Breaker	Trigger	Effect
Daily Drawdown Kill Switch	Loss >= 3% of day start equity	EA halts all new trades for the day
Consecutive Loss Stop	3 losses in a row	EA halts until next trading day
Daily Trade Limit	10 trades per day	No new entries even if score is high
Spread Filter	Spread > 25 points	Entry skipped; waits for tight spread
News Blackout	Within news time windows	All entries paused for 30 min buffer
Cooldown Timer	< 15 min since last trade	Prevents overtrading after a signal
ATR Volatility Gate	ATR < 0.4 or > 6.0	Dead or spiking market - entry blocked

8. Recommended Settings: $10 Account

> These are optimised conservative settings for a $10 cent account. Capital preservation is the priority over aggressive returns.

Parameter	Recommended Value	Reason
Risk_Pct	1.5	Risk $0.15 per trade on $10
Max_Daily_DD_Pct	3.0	Protect against 3 bad trades max
SL_Pips	8	Tight SL suitable for scalping
TP1_Pips	10	Lock profit quickly at 1.25:1 R:R
TP2_Pips	20	Let runner hit 2.5:1 risk/reward
Max_Cons_Losses	3	Stop after 3 losses in a row
Cooldown_Minutes	15	Avoid revenge trading
Min_Score	80	High bar ensures quality setups only

9. Backtesting the EA

9.1 Strategy Tester Settings

Setting	Value
Expert Advisor	GoldSurgeon Elite v1
Symbol	XAUUSD
Timeframe (attach)	M5
Model	Every Tick (most accurate)
Date Range	Minimum 3 months for meaningful results
Deposit	$10 (or $1000 for cent account simulation)
Leverage	1:500

> For meaningful backtest results, use at least 6 months of M1 tick data. Download via Tools > History Center in MT5 before backtesting.

10. Alert & Notification System

The EA sends real-time push notifications and journal messages for the following events:

Event	Notification Message
Trade Opened (BUY)	GoldSurgeon BUY opened | Score: XX | Lot: X.XX
Trade Opened (SELL)	GoldSurgeon SELL opened | Score: XX | Lot: X.XX
Trade Win	GoldSurgeon WIN: +$X.XX
Trade Loss	GoldSurgeon LOSS: -$X.XX | Streak: X
Daily DD breached	Printed to journal with DD percentage
Consecutive loss halt	Printed to journal with streak count

To receive push notifications on your phone, connect your MT5 mobile app MetaQuotes ID in: Tools > Options > Notifications.

11. Troubleshooting

Problem	Solution
EA not placing trades	Check: AutoTrading is ON (top toolbar). Check Journal for score logs
Score always below 80	Verify M5 chart, XAUUSD symbol. Check spread is under 25 pts
Compile errors	Ensure MQL5 include files Trade.mqh are present. Reinstall MT5 if missing
INVALID_HANDLE error	Symbol not available at broker. Confirm XAUUSD is in Market Watch
Partial close failing	Account balance too small to split lot below minimum. Increase balance
EA halted after 3 losses	Normal circuit breaker. EA auto-resets at midnight (new trading day)
Spreads constantly > 25	Switch broker or switch to cent account for tighter spreads
